

CENTRIFUGAL BLOWERS

A centrifugal fan is a mechanical device for moving air or other gases. Centrifugal fans have the ability to handle a variety of air flows relative to static pressure and temperatures. Centrifugal fans, also known as centrifugal air blowers, are one of the most widely used fans. The impellers are backward curved with radial blades which prevents sticking of materials to the blades.

Features

- Capacity: 250 m³/hr to 2,00,000 m³/hr
- High Efficiency with Low Noise
- Various Mounting Arrangements.
- Dynamically balanced.

Exhaust Systems

An exhaust system is usually piping used to guide reaction exhaust gases away from a process to the atmosphere. The entire system comprises of a blower to extract the fumes or gases generated at source and ducting to effectively vent out the gas to the atmosphere.

Clean Rooms

A cleanroom is an environment, typically used in manufacturing, including of pharmaceutical products or scientific research, as well as aerospace semiconductor engineering applications with a low level of environmental pollutants such as dust, airborne microbes, aerosol particles, and chemical vapors. We provide clean rooms with proper engineering involved according to ACGIH Ventilation guidelines. Special enclosures are used for varied applications based on the nature of the process involved in the room.

OTHERS PRODUCTS

- Pneumatic Conveying Systems
- Insert able Filters
- Vent Filter
- Storage Silo
- Over Head Conveyors

OTHER ACCESSORIES

- Filter Bags
- Filter Cages
- Explosion Vents

- Rotary Air Lock Valve
- Screw Conveyor
- Solenoid Valves
- Dust Suppression Systems
- Floor Conveyors

- Diaphragm Kits
- Bucket Elevators
- Impellers & Shaft
